Enable MongoDB's free cloud-based monitoring service, which will then receive and display
metrics about your deployment (disk utilization, CPU, operation statistics, etc).

The monitoring data will be available on a MongoDB website with a unique URL accessible to you
and anyone you share the URL with. MongoDB may use this information to make product
improvements and to suggest MongoDB products and deployment options to you.

To enable free monitoring, run the following command: db.enableFreeMonitoring()
To permanently disable this reminder, run the following command: db.disableFreeMonitoring()

Question 2. Write MongoDB queries for (4 points each): 100 points

Instructions

To run this script, make sure you run this on command prompt to import the data:

```
`mongoimport --db aaz7118_db --collection restaurants --file restaurants.json`
```

edit the above command at `--file <file relative path>` if the file is another directory or has another name.

You can then run the script using this command:

```
`mongo <aaz7118q2_verbose.js`
```

There are other versions of this script:

- aaz7118q2_pretty_quiet.js: uses .pretty() to reformat output - without printed comments,
- aaz7118q2_quiet.js: does not use .pretty() to reformat output - without printed comments,
- aaz7118q2_pretty_verbose.js: uses .pretty() to reformat output - with printed comments

The output of running aaz7118q2_pretty_verbose.js has been copied into "aaz7118_Assignment_4.pdf" with indexing for each query.

NOTE: I could only get `mongo <aaz7118q2_verbose.js` to work on command prompt. It did not work on bash or PowerShell.

This was completed using MongoDB shell version v4.2.23

Instructions

To run this script, make sure you run this on command prompt to import the data:

1. `mongoimport --db aaz7118_db --collection events --file historical-events.json`
2. `mongoimport --db aaz7118_db --collection meteor --file meteorites.json`
3. `mongoimport --db aaz7118_db --collection city --type csv --headerline --file worldcities.csv`

edit the above command at `--file <file relative path>` if the file is another directory or has another name.

You can then run the script using this command:

```
`mongo <aaz7118q3.js`
```

The output of running aaz7118q2_verbose.js has been copied into "aaz7118_Assignment_4.pdf" with indexing for each query.

NOTE: I could only get `mongo <aaz7118q3.js` to work on command prompt. It did not work on bash or PowerShell.
